

Daily Skincare Routine

Built from your 5 The Ordinary products. Apply thinnest texture first, thickest last.

Morning (every day)

Step	Product	Notes
1	Rinse face with water or use your usual gentle cleanser	Not in your cart. Use whatever you already have.
2	Niacinamide 5% Face & Body Emulsion	A small amount over face and neck.
3	Natural Moisturizing Factors + HA	Moisturiser. Locks everything in.
4	Sunscreen SPF 30+	Not in your cart, but essential. Both acids make skin more sun-sensitive.

Evening: face

Step	Product	Notes
1	Cleanse (gentle cleanser)	Dry the face fully before acids.
2	Acid night only: either Glycolic Acid 7% Exfoliating Toner or Salicylic Acid 2% Solution (see weekly plan)	Never both on the same night. Glycolic: cotton pad over the face, avoid the eye area. Salicylic 2%: only on blemish-prone areas, a thin layer. Wait about a minute.
3	Niacinamide 5% Face & Body Emulsion	Every night, including rest nights (skip acid, start here).
4	Natural Moisturizing Factors + HA	Final step.

Weekly acid schedule (face, evenings)

Mon	Tue	Wed	Thu	Fri	Sat	Sun
Glycolic toner	Rest	Salicylic 2% (blemish areas)	Rest	Glycolic toner	Rest	Salicylic 2% (blemish areas)

Weeks 1-2: use only **one** acid night per week to see how your skin reacts, then move up to the full plan above. If skin stings, peels or looks red, drop back to one acid night or skip a week.

Body routine (after a shower, 3-4 evenings a week to start)

Step	Product	Notes
1	Salicylic Acid 0.5% Body Serum	Body only, not the face. Use on rough or bumpy areas (arms, back, chest, legs). Start every other day and build up if skin is happy. Do not apply to broken or freshly shaved skin.
2	Niacinamide 5% Face & Body Emulsion	Over the body to moisturise. On days without the serum, use this on its own.

Ground rules

- **Patch test** every new product on a small area (inner arm) for 24 hours before first use.
- **Do not mix acids.** Glycolic toner and Salicylic 2% never share a night. The 0.5% body serum stays on the body.
- **Sunscreen every morning.** This is what stops the acids from working against you.
- **Keep acids away from** the eye area, lips and broken skin.
- **Pregnant or breastfeeding?** Check the salicylic and glycolic products with a doctor first.
- **Give it time.** Judge results after 6-8 weeks, not 6-8 days.
